# Chinmay B Sabarad

Belagavi, Karnataka | +91 6350429493 | sabaradchinmay2006@gmail.com | LinkedIn | Github | Portfolio

## Summary

Aspiring Software Engineer with hands-on experience in full-stack web development and applied machine learning. Demonstrated ability to build responsive, user-centric web applications using modern frameworks like React and Tailwind CSS and integrating machine learning models into user-facing platforms. Strong foundation in data structures and a passion for developing algorithmic solutions to practical problems.

## Education

**KLE Technological University Hubli** — Hubli, KA
*Bachelor's in Computer Science Engineering (9.1 CGPA)* — *Aug 2028*

**Central Public School** — Kota, RJ
*Sr. Secondary Education (87%)* — *March 2024*

**Jawahar Navodaya Vidyalaya** — Kota, RJ
*Secondary Education (94%)* — *March 2022*

## Projects

**Complaint Management System** | *React, Node.js, Express, MongoDB, JWT* — March 2026 – April 2026

- Architected and deployed a full-stack grievance portal on **Google Cloud Run** using a React + Vite frontend and a Node.js/Express REST API backed by MongoDB, enforcing HTTPS with CORS-secured endpoints.
- Implemented **role-based access control (RBAC)** across 5 user roles (Student, Faculty, Admin, HOD, Worker) with JWT authentication and bcrypt password hashing (salt rounds = 12).
- Built an **auto-escalation engine** that triggers HOD notifications for complaints unresolved beyond 5 working days, alongside a real-time notification pipeline delivering in-app alerts and emails on every status transition.
- Delivered an admin analytics dashboard with date-range filtering, PDF/Excel report export, anonymous complaint support, and photo evidence upload — validated against **32 functional test cases**, all passing.

**Spaceship Titanic** | *Python, Scikit-learn, XGBoost, Pandas, NumPy* — Feb 2026 – March 2026

- Competed in the **Kaggle Spaceship Titanic** binary classification challenge, achieving **81.4% accuracy** and ranking **206th globally** out of thousands of participants.
- Engineered features from structured passenger data including cabin deck/side extraction, group size derivation, and **null-pattern imputation**, feeding a tuned **XGBoost + ensemble pipeline** optimized via **cross-validation**.
- Applied systematic **hyperparameter tuning** and **feature selection** to iteratively improve model performance, benchmarking multiple classifiers (**Logistic Regression, Random Forest, Gradient Boosting**) before finalizing the submission stack.

**VANI** | *Python, PyTorch, Hugging Face, Pandas & Scikit-Learn* — Dec 2025 – Jan 2026

- Engineered a deep learning **NLP pipeline** to classify "Hinglish" (Code-Mixed Hindi-English) text, addressing the lack of support for Indian languages in standard libraries.
- Fine-tuned a Multilingual BERT (mBERT) transformer model using Hugging Face and PyTorch, achieving a significant improvement over baseline models for code-mixed syntax.
- Implemented a custom data preprocessing pipeline to handle unstructured text, toxic content, and linguistic nuances using Pandas and Python.

## Skills

**Languages**: C, C++, Python, JavaScript, TypeScript, HTML/CSS
**Core Concepts**: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks
**Frontend**: React.js, Next.js
**Backend / Databases**: Node.js, Express.js, FastAPI, MySQL, MongoDB
**AI/ML**: PyTorch, NumPy, Pandas, LangChain, MatLab
**Tools**: Git, GitHub
**Languages**: English (Proficient), Hindi, Kannada (Native)
